DEEP DIVE

Aerial Roof Measurement & Auto-Estimating Bounty

Everything you need to know to win $10,000.

What we'll cover

01 **Who we are & why this matters**

JobNimbus, the roofing market, and where AI fits.

02 **The bounty in detail**

Inputs, expected outputs, the dataset, what we're providing.

03 **Eligibility & rules**

Team size, experience, IP terms, what disqualifies.

04 **How you'll be judged**

Scoring rubric, judging schedule, what we reward.

05 **Q&A and next steps**

Form teams, sign up for slots, start building.

About JobNimbus

The CRM and operating system for roofing & contracting businesses.

#1

roofing CRM, trusted by thousands of contractors

4.8★

across 12,000+ mobile app reviews

13 yrs

building software for the contracting world

Why this bounty matters to us

Roof measurement is the bottleneck for every estimate our customers produce.

Today contractors pay third parties for aerial measurement reports, or measure manually for 30+ minutes per roof.

If AI can do it in seconds — accurately — it changes how the entire industry quotes work.

That's the opportunity. That's why we're spending $10K on a weekend.

The bounty

Address in. Roof measurements + workable estimate out. Fully automated.

INPUT

Address & imagery

We provide a curated dataset of property data. Real properties. Accurate measurements.

YOUR SYSTEM

AI pipeline

Vision models, geometry, agentic workflows — your call. Build whatever produces the best result.

OUTPUT

Measurements + estimate

Total square footage, facets where possible, line items, and a quote-ready estimate.

Stack is up to you. We don't care if you use OpenAI, Anthropic, open-source, geometry-first, agents — we care that it works.

What "done" looks like at 1:30 PM Saturday

A working demo. We hand you a property, you hand us measurements + an estimate.

MUST HAVE

- Accept aerial photos as input
- Output total roof square footage
- Output a structured estimate (line items + total $)
- Run end-to-end on a property we hand you live
- Show your work — explainability matters

NICE TO HAVE

- Per-facet measurements + pitch estimation
- Confidence scores on each measurement
- A clean UI (web, desktop, anything)
- Materials/waste calculations in the estimate
- Handles edge cases (occlusion, partial photos)

What we're providing

Sample ground truth

Known measurements for a subset of properties so you can sanity-check your pipeline.

Access to JobNimbus Eng/Prod

Our roofing-domain experts are on-site. Ask anything during the build window.

Eligibility & team rules

Designed to surface the engineers we want to hire.

Max 3

people per team. Solo builders welcome.

1:30pm

project submitted by 1:30pm tomorrow

Open

to any background — not just SaaS.

External

only. JN employees ineligible for THIS bounty.

You qualify if…

- You're an external engineer
- Solo or in a team of 2–3
- You've submitted something by 1:30p tomorrow

You don't qualify if…

- You're a current JN employee
- Your team has more than 3 people
- You can't agree to JN owning the IP

How you'll be judged

Five things matter. Top 5 advance to the live finals.

Accuracy of measurements

How close are your measurements to trusted commercial benchmarks (EagleView, gPro)?

Product

Did you bridge from measurements into a usable estimate? Would a roofer actually use the output?

Experience

How does the tool feel end-to-end — address in, estimate out? Polish, ease, error handling.

Craft

Code quality, novel use of AI, engineering judgment.

Demo

How you bring it to life on Saturday afternoon. Creativity. Wow factor.

Top 5 advance to finals · $10,000 to the winner

Saturday: judging schedule

AI judging against criteria across all submissions. Finalists present to panel of judges.

1:30 PM	**Submissions due** Form closes. Late submissions won't be considered.
1:30 – 2:00 PM	**Preliminary judging** Submissions evaluated against the rubric. Top 5 finalists notified by text.
2:00 – 3:15 PM	**Finalist round** Each of 5 finalists gets 15 minutes — demo + Q&A.
3:15 – 3:30 PM	**Judges deliberate** Final ranking and winner selection.
4:00 PM	**Awards** Winner takes $10,000.

Unsolicited advice from our engineers

Things that have killed past hackathon teams.

Ship something, then polish.

Teams that polish before shipping something comprehensive will struggle to wow.

Don't over-engineer the model layer.

Off-the-shelf vision models + clever post-processing > training from scratch.

Solve one property end-to-end first.

One full pipeline working > five half-built components.

Practice your demo.

Finalists get ~5 minutes to demo. We've seen winning code lose to strong demos.

Quick FAQ

Q Can I use my own pre-trained models?

Yes. Anything legal and you can demo live is fair game.

Q Do I need to be on-site the whole time?

You and your team must be present for judging. Building can happen anywhere.

Q Will I get hiring consideration if I don’t win?

If you build something good, yes. Win or lose.

Q Can I use commercial APIs?

Yes. Walk us through what you used at judging.

Q Can I work on multiple bounties?

You'll have to choose — judging happens at the same time.

Let’s Build

Make us regret capping the prize at $10K.

1. **Pick/form your team**

   Max 3 people

2. **Github repo**
